

Environmentally Friendly

Not only is **PaveShield** an excellent choice to protect and preserve your asphalt pavement, it is also an environmentally responsible one. **PaveShield** is a low VOC, non-flammable coating that emits no obnoxious odors or fumes. It contains no solvents or coal tar to irritate skin.

Independent tests confirm that **PaveShield** will outperform both conventional coal tar and asphalt based coatings.

PaveShield[®]

Advanced Pavement Protection

Protecting Pavements Across America

From coast to coast, America's leading corporations have chosen **PaveShield** to protect their asphalt parking lots. **PaveShield** provides tough, long lasting protection that will prolong the life of your investment.

**The Revolutionary Solution
to Restore Your Asphalt Pavement**

PaveShield[®]

Advanced Pavement Protection

Protect Your Valuable Asset

Today, your asphalt parking lot is more valuable than ever. And now, you can protect your investment with a tough and durable coating that is also environmentally friendly.

Your parking lot's greatest enemy is not just the punishment from daily traffic. The insidious elements of air, sunlight and moisture all conspire to destroy it. Halt this attack on your investment and extend the lifecycle of your pavement while keeping your property looking its best. With PaveShield, your asphalt pavement will be protected and maintain its rich, black appearance.

Prevent Costly Repairs

PaveShield will protect, preserve and beautify your parking lot for years to come by restoring and rejuvenating the asphalt pavement to prevent cracking, raveling and checking.

PaveShield tightly seals the surface and repels moisture, forming an impenetrable barrier that blocks out the drying action of the sun, as well as the destructive effects of winter's freeze and thaw cycles.

PaveShield is also chemically reinforced to protect against gas & oil spills. Guard your pavement against these enemies now and avoid costly repairs later!

Tomorrow's Technology, Today

PaveShield's innovative formulation was no accident. It was a commitment. Years of research were devoted to developing a tough, resilient coating free of coal tar that would set a new standard in asphalt pavement protection. PaveShield is truly a 21st century solution.

Extremely Tough & Long Lasting

PaveShield is fortified with Duraflex, our proprietary high molecular weight polypetrol resin. This binder base is emulsified in our high temperature, high shear, state-of-the-art manufacturing process. This superior fusion of Duraflex and other quality raw materials creates a homogeneous coating capable of high sand loads, providing an exceptionally tough, long lasting, skid resistant surface.
